UNDERGROUND METAL DETECTOR

Product>>Metal Detector >> MD-5008 Metal Detectors

◆ 【Application】:

The metal detectors are mainly used to detect and identify underground metals. Besides military using, they are widely used in:

(1) Detector can identify the gold , silver, aluminum...etc
(2) Security inspection, public security organs' ransack:
(3) Scan metal foreign matter in raw, fuel and foods;
(4) Scan metal articles in mail or luggage;
(5) Detect underground pipelines, cables;
(6) Archeology, mineral exploration, find underground metal articles.

◆ 【Specification】:

(1) Emission Frequency: 6.99KHz
(2) Signal Frequency: 437Hz
(3) Weight: 2.87KG
(4) Sensitivity: Small coil: 25~30cm (test 25US cent)
Big coil: 35~40cm (test 25US cent)
(5) Max Detection: Small coil: 1.5 meters
Big coil: 3.0~3.5 meters
This conclusion is elicited by testing a aluminium sheet (60cm*60cm*1cm) buried in dry soil.
(6) Power Supply: 8pcs 1.5V Batteries
(7) Operation Mode: Ground balance mode;Discrimination mode.
(8) Packing: 4pcs/ctn

◆ 【Function】:

MD-5008 metal detectors, 3-3.5m depth of detection, adopt advanced technique and attach high quality components which have features of ground balance, good discrimination ability, wide detection range, accurate orientation, strong resolution and easy operation.

◆ 【Component】:

(1) Attach external battery box and bag
(2) Attach big and small search coils

◆ 【Package】:

(1) G.W./Unit: 5.3kg
(2) Size/Unit: 83*33*17cm
(3) Qty./CNT: 4pcs
(4) G.W./CNT: 21.2kg
