

LAYER CAGE EQUIPMENT PRODUCTS

LITTLE GIANT

Fully assembled with high installation precision,
more stable operation

Product Characteristics

- ▶ Fully assembled with high installation precision;
- ▶ Reasonable bottom net design and stable egg collecting structure;
- ▶ Patented technology of drinking nipples;
- ▶ Reasonable design of manure cleaning system;
- ▶ Multiple Environmental Control design with high degree of intelligence and triple alarming system;
- ▶ Diversified feeding methods.

Product Advantages

- ▶ Fully assembled equipment, more stable operation, longer life of equipment;
- ▶ 7°bottom net with steel line support structure, to ensure its strength and elasticity;
- ▶ Patented technology drinking nipple, precise automatic control of water drinking, avoiding water leakage to the greatest extent;
- ▶ Low Deviation rate in the manure clearing mechanism equipment with reasonable structure cleaner manure clearing;
- ▶ The Environmental Control System provides a good living environment for chickens, ensures the a suitable environment for the growth of poultry and reduces the rate of disease and death;
- ▶ Diversified feeding methods, including feed cart and chain feeding.

Benefits for Customers

1.

The equipment adopts zinc-aluminum-magnesium ternary alloy plate with its corrosion resistance 3 to 4 times of the ordinary material. The long-term use of this equipment will make the investment cost lower; (275g galvanized sheet is optional)

4.

The bottom net design fully considered the angle, strength and flexibility, using 7°roll angle design to reduce the broken egg rate by more than 50% so that the revenue could be increased 0.70 ~ 1.00 CNY each chicken;

2.

The cage mesh is made of zinc-aluminum alloy wire with its corrosion resistance 3 to 4 times of the common material;

5.

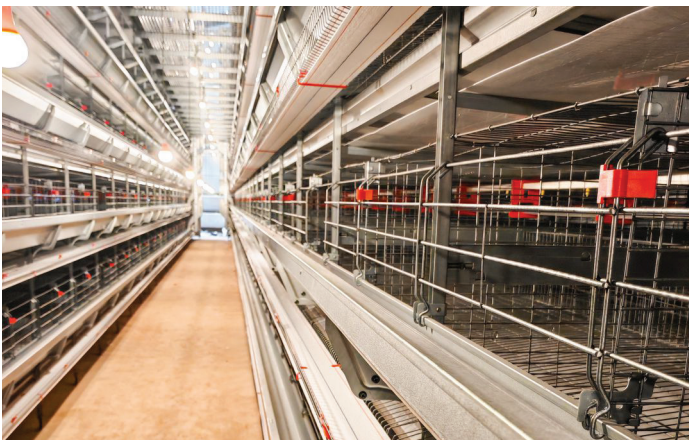

Overall stability of the equipment, convenient management, annual savings of 60,000.00 CNY in salary costs;

3.

The ultra-high outer edge design of the trough to reduce 2g feed waste one chicken a day, a single unit of 100,000 laying birds feeding mold to save more than 200,000.00 CNY of feed costs each batch;

6.

The self-developed Digital Farming APP by Little Giant can manage the operation of each chicken house precisely online. Investors or managers can understand the operation of the farm anytime and anywhere. It's easy for investors and managers to analyze data, avoid cost wastage and other losses due to poor supervision, and to improve the protection of inputs and outputs.
