

Addressable Fire Indicator Panels

MX1 Fire Alarm System

MX1 15U

Note: Optional 3U ASE bracket, 3U T-GEN 50 Mic & switch bracket, and 3U AS1668 Fan Control bracket shown fitted

- Single *MX DIGITAL* Loop supporting up to 250 *MX* devices
- Add up to 7 optional *MX DIGITAL* loop cards for a total of 2000 *MX* devices
- Network up to 250 *MX1* panels over fibre, copper or ethernet
- *MX DIGITAL* multi-sensor analogue addressable detector technology
- Field-proven fire detection algorithms
- Bi-directional IR communication with 850 Series Gen6 detectors
- Clear alarm messages on 4-line LCD
- Compact zone LED display
- High level EWIS interface
- Up to 126 AS 1668 Fan Controls
- "Profiles" simplify programming of complex detection and logic functions
- Day/Night modes for alarm sensitivity adjustment and output logic functions
- Powerful, field-programmable logic equations, functions, timers
- Pseudo points controlled by logic equations for enhanced control options
- Built-in clock/ calendar with automatic daylight saving adjustment
- Comprehensive test facilities including automatic self-test and fast commissioning test mode
- High capacity integral 5A power supply
- 19" Rack Cabinet
- Earth fault supervision
- Fuse supervision
- Windows-based programming tools

The VIGILANT MX1 is an innovative, networkable multiple loop analogue addressable fire indicator panel incorporating the latest technology. It complies with AS 7240.2:2004, AS 7240.4:2004, AS 4428.3:2010 and the functional requirements of AS 4428.10:1998 and AS 4428.7:1999. Its support for Tyco MX TECHNOLOGY fuzzy-logic detection algorithms and powerful control functions make it suitable for a wide range of fire protection applications, including those in hazardous areas.

MX1 8U

MX1 utilises *MX VIRTUAL* multi-sensor analogue addressable detectors with dual sensors (photoelectric and heat, or CO and heat) to allow the best detection mode for a situation to be easily selected.

Detection modes may include: smoke/ CO detection only, heat-enhanced smoke/ CO detection only, smoke/ CO plus heat detection, heat-enhanced smoke/ CO plus heat detection or heat detection only.

Heat detection can be either fixed temperature, or combined fixed temperature and rate-of-rise.

For specific applications, single-sensor *MX* analogue addressable ionisation and photoelectric smoke detectors, high sensitivity smoke detectors (VESDA), heat-only detectors and flame detectors are also available.

The *MX DIGITAL* communications protocol used on the detection loop is designed to provide high reliability and fault resistance, with operation possible over many cable types.

This often permits system upgrades using existing cable. The loop configuration ensures that communications continues in the event of a loop open circuit fault condition.

In the case of a short circuit, up to 100 short circuit isolator detector bases or modules may be fitted around the loop, to limit the effect of the fault to the devices between isolators.

Approvals

MX1 is certified to AS 7240.2:2004, AS 7240.4:2004: "Fire detection and alarm systems", AS 4428.3:2010: "Fire detection, warning, control and intercom systems - Control and indicating equipment - Fire brigade panel" AS 4428.10:1998: "Fire detection, warning, Control and intercom systems - Alarm investigation" ActivFire Listing Number afp-2320

MX1 Remote Fire Brigade Panel

Addressable Fire Indicator Panels

MX4428 Fire Alarm System

The MX4428 is suitable for sprinkler flow switch monitoring and remote testing, AS 1668 air-handling smoke detection and control.

- Comprehensive test facilities
- Automatic self tests
- Field-programmable
- LCD control panel
- Optional Zone LEDs
- LCD zone description text and/or individual point text

Powerful boolean logic functions for output control and network communications allows control and indication of other panels and devices.

Printer logging includes zone text and point events. Outputs for:

- Door holders
- Local mimics
- Remote repeater panels
- Colour graphics displays
- High level interface for EWIS, BMS, etc.

ActivFire Listed afp-1446

FPANZ Listed VF/117

The VIGILANT MX4428 is an intelligent distributed multi-processor fire alarm and fire protection control system, which combines both analogue addressable and conventional (non-addressable) detection. It features intelligent fire detection algorithms, powerful control programmability and multi-panel networking to handle the most complex applications. MX4428 supports the *MX* multi-sensor virtual detectors (Photoelectric and Heat, CO and Heat, Ionisation only, Heat-only) and a range of functional bases, analogue addressable callpoints, input modules, and output modules. Smoke/CO and temperature readings from the multi-sensor detectors are able to be combined in various ways to achieve optimum detection for each location.

MX4428SL Single Loop Addressable Panel with T-GEN 50 Fitted

Note: Optional 3U T-GEN 50 Mic & switch bracket and ASE shown

The VIGILANT MX4428 Single Loop panel is a competitively-priced fire detection and alarm system that targets small to medium sized applications. It combines the latest *MX DIGITAL* analogue addressable technology, pioneered by Tyco, with intelligent fire detection algorithms, powerful control programmability, and 50W tone generator occupancy warning system. As standard, the MX4428 Single Loop panel comes with an *MX* Protocol Responder fitted that supports up to 200 *MX* multi-sensor virtual detectors (Photoelectric and Heat, CO and Heat, Ionisation-only, Heat-only) and a range of functional bases, addressable callpoints, input modules and output modules. It also includes a prewired brigade interface complete with mounting bracket for Centaur ASE (FP0871) / WA/Cube ASE (FP0872). An optional kit which includes public address, microphone and switch bracket to add PA facility to the pre-installed tone generator is also available. ActivFire Listed afp-1446

MX4428 System Diagram

Responder Loop Design

Central to the MX4428 system is the proven “Responder Loop” architecture, which allows intelligent responders to be either distributed at selected locations around the protected premises, or located centrally at the FIP. Analogue addressable loop wiring and other inputs and outputs are terminated at these responders, which in turn are connected by the 4-wire responder loop to the FIP.

The responder loop is fully protected: a partial or complete break, or short, anywhere on the loop is detected and isolated automatically at the adjacent responders. All system operations are fully maintained even in the presence of the fault condition. This design offers many benefits:

- Cable concentration at the master FIP is greatly reduced.
- Installed cost is lower because the loop design requires less wiring than conventional methods.
- Compatibility with many existing conventional and analogue addressable systems, providing a ready upgrade path.
- Ideal suitability as a main panel upgrade with old sub-panels connecting via responder inputs.
- High-integrity communications is fully supervised and protected by redundant paths.
- Loop fault sensing and isolation is provided at every responder.
- Intelligent diagnostics identifies location of faults rapidly.
- Expansion and alterations are easily accommodated with minimal additional wiring.
- Responder Loop Boosters permit virtually unlimited loop length.
- No additional multicore wiring is required for AS 1668 controls, but optional use of dedicated IO-NET (PLC) system is also possible.

MX FASTLOGIC

Detection Algorithms

SMARTSENSE is a field-proven, reliable detection algorithm, providing unwanted alarm reduction, compensation for ambient conditions and a wide range of programmable sensitivity settings. *MX FASTLOGIC* is a “fuzzy logic” based algorithm applied to photoelectric smoke and heat enhanced smoke detection, and designed to differentiate between the smoke and temperature patterns of real fires and typical causes of unwanted alarms. Both algorithms provide:

- Detector pre-alarm sensing for early warning of a potential alarm.
- Compensation for soiling and changes in ambient conditions.
- Logging “detector dirty alert” when compensation limits are about to be exceeded, to allow maintenance to be scheduled.
- Heat sensor can be programmed to act independently as a Heat Detector
