

WESTERS®

8008

COLD GALVANIZING COMPOUND

Cold Galvanizing Compound

The ultimate in corrosion protection. This premium fast-drying, high solids coating provides maximum protection to steel exposed to severe corrosive environments.

A high performance, epoxy-based coating that fuses zinc to the metal substrate, it protects against corrosion --- equal to or better than hot-dipped galvanizing. It has excellent anti-sag and anti-setting properties, and may be top coated with conventional metal primers or finish coats.

- 97%-pure zinc dust
- VOC-compliant
- Highly resistant to salt corrosion and water
- Meets or exceeds performance requirements for MIL-P-26915A, MIL-T-26433, MIL-P-21035, MIL-P-46105 and Preece Tests
- Authorized by USDA

Use WESTERS 8008 on surfaces subject to severe corrosion and rust conditions such as fences, gutters, bridges, structural steel, wrought iron, farm equipment. Also ideal as a maintenance spray for highways, food plants, power plants, refineries or damaged galvanized surfaces.

KEEP AWAY FROM CHILDREN
