## New Campbell 3-inch Fiberglass Hand Line Utility Blocks

When you're up in a bucket, work can be tough: Heat, cold, rain, wind...you just put up with it and do your job. But you do appreciate the little things that help you get down quicker, and that's where we come in. At just over a pound and a half each, these new hand line blocks won't slow you down. And their tough fiberglass construction gives them a Working Load Limit of half a ton with a 3:1 design factor. Combine all that with a smooth-rolling permanently lubricated 3-inch sheave that has the capacity to run up to 5/8" rope and you have something that gets lines up quick and gets you down fast.

- Block sides and sheave made from Dielectric (insulating) material tested to ASTM D149-97a
- 1,000 lb. Working Load Limit with a 3:1 design factor
- Capacity for up to 5/8" rope

Catalog Number	Description
7380300	Campbell 3" Hand Line Block with Latched Swivel Hook
7380302	Campbell 3" Hand Line Block with Swivel Meat Hook

*\*WORKING LOAD LIMIT is based on Resultant Load. Know the WLL of the block or blocks to be used. DO NOT EXCEED THE WLL.*
