Civacon – World-Class Technology, First-Class Service and Support

Every day, Civacon's mission of providing effective solutions for companies involved in the transportation and handling of hazardous bulk commodities is put to the test. To meet this challenge, Civacon equipment, around the world, sets the standard for performance—safeguarding against costly spills, overfills and fugitive vapor emissions, while delivering operating efficiencies over the road and at the fueling terminal.

Civacon takes its mission seriously. Our safety components and systems help protect the very environment we, and future generations, will live in. With so much at stake, only Civacon has the global scope and the world-class resources capable of delivering its promise of real-world solutions to its customers.

Innovative technology

As the world's leading provider of cargo-tank product safety components and technology, we continuously strive to advance the meaning of "systems solutions." But to deliver tomorrow's technology today, we don't simply rely on engineering expertise or manufacturing might. Innovation comes as much, and maybe more so, from an organization's ability to "hear" what the marketplace wants. So, at Civacon, we listen closely to our customers. We actively seek out industry influencers. We help to shape and drive the industry. Then we marry this market data with our scaleable engineering and production resources. Because it's not just about being first to the market; it's about being the best.

Of course, we do have dedicated, world-class engineering, quality-control labs and testing capabilities. Which might be why Civacon holds numerous patents for cargo-tank component systems—more than any other company in the industry. We're ISO 9001 certified and our advanced manufacturing processes, CAD design environments, Finite Element Analysis (FEA) and rapid-prototyping technology all enable us to react quickly and precisely to market feedback. Here again, our goal is never to be first with new technology—it's to be first with real-world solutions.

Technology you can trust, people you can depend on

To earn and keep your trust, we must consistently deliver real solutions, at every level—this fundamental drives our business. And while technology is important to this realization, people are more important. So, while we've invested millions of dollars in technological resources and capital improvements, including the institution of the Oracle ERP system to better manage our customer and vendor transactions, we invest even more heavily in our people. Why? Because ultimately business is conducted on a human level, between people, not companies. It's a personal commitment to customer satisfaction, held by every one of our employees, that makes Civacon the brand you can count on, today and tomorrow.
