

SRTSV4105 Spray Head Valve - AGM Type

The SRTSV4105 is machined from Marine grade alloy with an output capacity of up to 2500 litres per minute (660 US Gallons per minute) and provides a dense even spray discharge of up to 6.7 metres (22 feet) and a spray width of up to 11 metres (36 feet). Air pressure holds the valve closed while water pressure opens the valve (valve opening pressure 0.55 bar / 8 psi).

An internal spring closes the valve when the water pump is shut down or an absence of air pressure exists and eliminates the need for additional shut off valves.

Other features of the SRTSV4105 include:

- Stainless steel diaphragm sandwich plates.***
- Stainless steel spring, fasteners and eccentric washers.***
- Valve base with 'o' ring.***
- Valve inlet port OD 63 mm (2.5 inch)***
- Fully serviceable***
