

VISY-X

Automatic Tank Gauging System

FAFNIR GmbH: Innovation with Tradition.

Quality and satisfaction

Company

The FAFNIR GmbH, based in Hamburg, Germany, develops and manufactures since 1965 filling safety devices, overfill prevention devices, limit signal controllers and continuous level gauging solutions for all types of liquid.

The optimisation of process controls, improvements in cost efficiency and the protection of people and the environment are at the heart of our business.

Our close and trusting relationship with our customers is a key factor in the practice-oriented implementation of innovative ideas and the functionality of our products.

Quality for your satisfaction:

To provide all customers with devices of consistently high quality, FAFNIR years ago introduced the internationally-recognised, comprehensive quality management system in accordance with ISO 9001 (EN 29001). Our expertise in the development and manufacture of explosion-proof equipment is certified by an independent body. All our products are subject to strict FAFNIR quality requirements. We are committed to meeting international standards and applicable EU directives.

VISY-X

Tank Level Gauging and Environmental Sensors

The system VISY-X supplies tank level information and supports a range of components from the field of environmental sensors. It improves cost efficiency and logistics at petrol stations and also helps to protect people and the environment. Through the integrated water detection it creates quality assurance. In conjunction with the cash system, it offers real-time volume and leakage monitoring. and its support of remote data transfer makes it a high-quality resource management tool.

An excerpt from the
VISY-X product range:
VISY-Stick, VISY-Stick Sump,
VISY-Command, VISY-RFT
and VISY-Output

Application

VISY-X, the high-precision tank gauging system, is specially designed for use in petrol stations. Its modular architecture, however, also makes it ideal for use as a tank management system

for any area of industry in which mineral oil products are stored. VISY-X is suitable for both underground tanks and above-ground storage tanks.

Features of the FAFNIR technology

- High-precision level and environmental sensors based on the magnetostrictive measuring principle
- In conjunction with remote data transfer, it is an efficient resource management tool
- Economical resource management of the petrol station network
- Permanent display of tank contents
- Continuous water level reading
- Delivery volume monitoring
- All wetted parts are made of high-quality stainless steel
- Easy and cost-effective start-up
- Maintenance-free
- Connection to a wide range of cash systems (PoS) with manufacturer specific interfaces
- Optional: IFSF-LON field bus technology
- Optional: wireless link with long battery life
- Worldwide approval: ATEX, NEPSI, IECEx and UL-Brazil
- Certificates: CPA, EPA, OIML

Function description

One system of VISY-X comprises 1 to 16 VISY-Stick sensors and a VISY-Command control unit. It can be optionally extended by a wide range of hardware and software components (e.g. environmental sensors, I/O interfaces). The VISY-Stick magnetostrictive level sensor provides

highly accurate readings of the product filling level, product temperature and water level. The VISY-Command control unit contains the power supply for the VISY-Stick sensors with its variety of integrated protocols and is able to interface to a wide range of management

systems (PoS/BOS). There is also a comprehensive selection of connection methods for the PC, display, modem, alarm systems, etc. The VISY-X sensors are able to be connected wirelessly to the VISY-Command RF control unit.

VISY-Stick

The level and environmental sensor based on the magnetostrictive measuring principle

VISY-Stick is a level and environmental sensor that has been specially designed to offer high-precision volume and leakage monitoring.

VISY-Stick magnetostrictive sensors with screw-in unit (left) and for riser installation (right)

Function

The VISY-Stick sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position. The sensor electronics transmit current pulses through the wire, which generate a circu-

lar magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float positions and the temperature are calculated from the different propagation times.

Design

A VISY-Stick comprises:

- » Stainless steel sensor housing
- » Stainless steel probe tube
- » Brass screw-in unit (height adjustable)*
- » Stainless steel product float
- » Stainless steel water float

Features of the FAFNIR technology

- High-precision sensors based on the magnetostrictive measuring principle
- Detects product filling level, product temperature and water level
- All wetted parts are made of high-quality stainless steel
- Maintenance-free
- Permanent self-diagnostics
- Also suitable for AdBlue
- Optional: with 1" floats and screw-in unit
- Wireless link to VISY-Command supported

* for use in AdBlue, the screw-in unit is made of stainless steel

VISY-Stick

VISY-Stick Advanced

The high-precision level and environmental sensor based on the magnetostrictive measuring principle

The VISY-Stick Advanced level sensor is ideal for applications that demand maximum precision and is also suitable for detecting tank leaks.

VISY-Stick Advanced magnetostrictive sensors with screw-in unit (left) and for riser installation (right)

Function description

The VISY-Stick Advanced sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position. The sensor electronics transmit

current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the probe head, these waves are converted into an electrical signal. The float po-

sitions are calculated from the different propagation times. For precision temperature measurements, the sensor tube of the VISY-Stick Advanced contains temperature sensors.

Features of the FAFNIR technology

- Detects product filling level, water level, and temperatures at multiple points along the measurement length
- Precise gauging of product temperature by means of temperature sensors
- Detects even the most minimal of level changes
- Wireless link to a VISY-Command RF possible
- Certificates: CPA, EPA, OIML

VISY-Stick Advanced (screw-in unit installation)

VISY-Density

The highly accurate density measuring module

The VISY-Density module is designed for the measurement of fuel densities. It can be mounted on the VISY-Stick Advanced sensor without the need to install an additional sensor. In combination with the density module the VISY-Stick Advanced provides accurate information about the product filling level, water level, product temperature and product density in the tank.

The magnetostriuctive sensors
VISY-Stick Advanced Density with
screw-in unit (left) and
for riser installation (right)

Function description

Inside the VISY-Density module* the buoyancy of a displacer is measured (Archimedean principle). It provides precise information as to whether fuel in the tank is in conformity with

legal and in-house standards. Any changes and deteriorations of the product quality can be measured and alarms can be configured in VISY-Command. The tank level gauging and

VISY-Density combination will enable you to control and manage your valuable wet stocks in every respect.

* Patents pending

Features of the FAFNIR technology

- Continuous and hysteresis free density measurement
- Function in conjunction with the level sensor VISY-Stick Advanced
- Compact design
- Quality control of fuels
- Recognition of water containing sump fluids in ethanol blends
- Determination of water content in E85 to E100 fuels

VISY-Stick Flex

**The flexible level and environmental sensor
based on the magnetostrictive measuring principle**

VISY-Stick Flex is a level sensor which is especially designed for bulk storage tanks.

Function description

The VISY-Stick Flex sensor operates according to the magnetostrictive measuring principle. A wire made of magnetostrictive material has been integrated into the flexible corrugated hose. The special design of the sensor allows the sensor body to be bent. So the VISY-Stick Flex can be packed compactly and

shipped at low cost. Another advantage is the easy installation. A weight at the lower end of the sensor stretches it out to its full length, and a magnet placed below the weight secures the sensor to be in place. When the magnet is in contact with the bottom of the tank (after installation) any unintentional

movement of the VISY-Stick Flex is avoided. When the installation of the VISY-Stick Flex level sensor has been completed, the corrugated hose is positioned vertically and both the product and the water float can freely move up and down.

Features of the FAFNIR technology

- High-precision sensor based on the magnetostrictive measuring principle
- Detects product filling level, product temperature and water level
- Sensor length up to 15 meters
- Compact packaging and easy transport thanks to the corrugated tube
- Weight at end of sensor guarantees vertical installation
- Lower end of the sensor held in place by a magnet
- Installation in tanks with low ceiling height possible
- Easy installation
- Installation in 1½" process connection possible
- Wireless link to a VISY-Command RF possible
- Maintenance-free

VISY-Stick LPG

The level sensor for liquefied petroleum gas based on the magnetostrictive measuring principle

The VISY-Stick LPG level sensor supplies information about the fuel levels in LPG tanks.

The magnetostrictive sensor with buna float and pressure-resistant stainless steel screw connection is specially designed for use in liquefied petroleum gas.

VISY-Stick LPG for direct installation in the tank

Function

The VISY-Stick LPG sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. A magnet integrated in the float magnetises the wire at the

float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates

towards the probe head. In the probe head, these mechanical waves are converted into an electrical signal. The float positions and the temperature are calculated from the propagation time.

Features of the FAFNIR technology

- Magnetostrictive sensor for use in liquefied petroleum gas (buna float, pressure-resistant stainless-steel screw connection)
- Continuous monitoring of product level and product temperature
- Also available with a 1" float
- Two installation versions: direct installation or installation with installation kit

Technical data

VISY-Stick LPG

Dimensions in mm

Variable LPG installation kit

The variable LPG installation kit comprises a jacketed pipe with special LPG float and a cutting ring fitting with $\frac{3}{4}$ " NPT external thread.

Variable LPG installation kit
to install VISY-Stick LPG

Function description

The installation length of the variable LPG installation kit can be adjusted. The exact installation dimensions do not need to be known for this installation.

The attachment to the process connection of the tank is done with a cutting ring fitting which is movable on the jacketed pipe and can be adapted to the tank diameter. If necessary, the length of the jacketed pipe can be cut on-site.

After fixing the installation kit, the level sensor is simply slid into the jacketed pipe and attached. Now, the level sensor is not in the pressurised chamber and can be replaced at any time without releasing the pressure in the tank.

Variable LPG installation kit

Dimensions in mm

Features of the FAFNIR technology

- Adjustable installation length
- No prior knowledge of exact installation length required
- Can be cut on-site
- One-time emptying of the tank during the installation
- Significant cost savings
- Easy installation
- Material: Stainless steel, buna
- Maintenance-free

VISY-Stick Interstitial

The leakage sensor for double-walled tanks based on the magnetostrictive measuring principle

The VISY-Stick Interstitial is a sensor for installation in the intermediate chamber and is designed to guarantee rapid leak detection. It is used in double-walled tanks whose intermediate chambers are filled with a leak detection fluid (e.g. brine, glycol, etc.). An alarm is issued from VISY-Command if the fluid level in the intermediate chamber leaves a specified range.

**VISY-Stick Interstitial
with screw-in unit (left)
and for riser installation (right)**

Function

The VISY-Stick Interstitial sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. A magnet integrated in the float magnetises the wire

at the float position. The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates

towards the probe head. In the probe head, these waves are converted into an electrical signal. The float position is calculated from the propagation time.

Features of the FAFNIR technology

- Continuous monitoring of the fluid level
- VISY-Command gives instant alarm in the event of a leak
- Easy and cost-effective to install and commission

VISY-Stick Sump

The sensors for manhole and dispenser sumps based on the magnetostrictive measuring principle

The VISY-Stick Sump sensors are used to monitor the man-hole sump and the sump underneath the dispenser for fluids that could potentially accumulate there. They are capable of distinguishing between water and fuel rapidly and accurately.

VISY-Stick Sump
(blue for manhole sump,
red for dispenser sump)
and the VISY-Stick Sump
installation kit

Function description

The VISY-Stick Sump sensor operates in accordance with the magnetostrictive measuring principle. The probe tube contains a wire made of magnetostrictive material. Magnets integrated in the floats magnetise the wire at the float position.

The sensor electronics transmit current pulses through the wire, which generate a circular magnetic field. A torsional wave develops at the point where the two magnetic fields overlap and it propagates towards the probe head. In the

probe head, these waves are converted into an electrical signal. The float positions are calculated from the different propagation times. When necessary the water level, fuel alarm or tamper alarm are reported.

Features of the FAFNIR technology

- Continuous monitoring of the water or fuel level in the man-hole sump and dispenser sump
- Alarm in the event of fuel and/or water being detected
- Encapsulated design for protection against contamination
- Anti-Tamper device

VISY-Reed Sump

The sensors for manhole and dispenser sumps with reed switches

VISY-Reed Sump sensors detect liquids in the manhole sump and under the fuel dispensers. The level of the liquid is monitored and an alarm will be released when the threshold has been passed.

VISY-Reed sensors are a low-cost solution for easy and reliable detection of liquids.

VISY-Reed Sump
blue for the manhole sump
red for the dispenser sump

Function description

VISY-Reed Interstitial sensors combine simple float switches based on reed contacts with the VISY-Sensor interface for connection to the VISY-Command.

The float follows the level of the liquid as it rises, and a magnet opens a reed switch inside the sensor tube. This alarm message is transmitted directly to VISY-

Command. Thanks to the low power input, VISY-Reed sensors of different types can be operated parallel to a VISY-Stick.

Features of the FAFNIR technology

- Solid, stable design
- Housing made of brass nickel-plated, float made of stainless steel

- No additional cable required due to operation on the

VISY-Sensor bus parallel to VISY-Stick and VISY-Reed Sump

VISY-Command

The control unit

The control unit
VISY-Command

VISY-Command contains the intrinsically safe power supply for the VISY-Stick sensors and their

control unit. Various interfaces ensure that it always has access to the latest data.

Features of the FAFNIR technology

- Up to 3 different VISY sensors can be connected to one terminal by a common cable
- Highly flexible thanks to modular architecture
- Easy to upgrade and retrofit
- IFSF-LON compatible
- Easy to configure thanks to free VISY-Setup software application
- Easy start-up
- The current firmware will be provided free of charge throughout the entire product life cycle (on request).
- Communication via Ethernet possible
- Free, user-friendly software for firmware updates
- Wireless communication of VISY-Command RF with VISY-Stick Sensors

Function description

The VISY-Command control unit has a modular architecture. The internal components are modules for DIN rail installation that can be retrofitted or converted at any time. VISY-Command is available in the form of basic versions VISY-Command 8 and 16, i.e. with either 2/4/8 or 16 sensor connections. Up to 3 different sensors (e.g. VISY-Stick, VISY-Stick Interstitial and VISY-Stick Sump) can be connected to one terminal by a common cable.

The control unit is also available in the form of VISY-Command RF; this supports the wireless operation of up to 16 VISY-Stick sensors.

VISY-Command provides an intrinsically safe power supply for the VISY-Stick sensors. The measured values supplied are prepared in such a way that all of the latest measurement data can be viewed at any time on a superordinate system (e.g. cash system, petrol station controller, VISY-Monitor PC software...) connected to a serial port. Data transmission is supported by various, common data protocols, e.g. Ethernet and IFSF-LON.

The extension interface of VISY-Command enables multiple external VISY-View Touch displays (e.g. fuel tanker display and local display in the office) to be connected and positioned where they can be seen and operated by personnel at all times. VISY-Command itself can be fitted in a location that achieves the most cost-effective cabling arrangement (e.g. power distribution unit or basement). By contrast with systems having an integrated display, the major advantage of our system is that it is not necessary to have all of the sensor cabling routed through the building to the viewing point (e.g. the office).

The optional VISY-ICI 485 interface makes it possible to connect multiple VISY-Input/-Output units. These enable the inputting (VISY-Input) of additional external alarms (e.g. oil separators) and/or the outputting (VISY-Output) of alarms by way of relay contacts.

VISY-Command is configured using the VISY-Setup software application through the separate serial service port. As a result, practically all maintenance and diagnostics tasks can be carried out while the entire system is still in operation. It is not necessary to switch off individual components: petrol station operations are not affected. VISY-Setup is free of charge and, in addition to offering user-friendly and efficient direct configuration by notebook, it also supports remote servicing via a modem or serial-to-Ethernet converter.

VISY-Command GUI

The control unit with a graphic display

VISY-Command GUI
with printer

- Instant alarm message via e-mail
- Daily report via e-mail
- Static leak detection

VISY-Command GUI contains the intrinsically safe power supply for the VISY-Stick sensors and their control unit. Various interfaces ensure that it always has access to the latest data. The integrated display unit with the 5.7" colour touch screen provides and dis-

plays the current measurement values and the reporting functions (log file) in a user-friendly form. The VISY-Command GUI has a display with a clearly structured and easy to operate interface. The most important information, e.g. tank level and alarms

are displayed directly and up-to-date on the screen. Using the touch screen, operators can call up detailed information simply by touching the tank graphics or the function keys.

Features of the FAFNIR technology

- Up to 3 different sensors can be connected to one terminal by a common cable.
- Up-to date overview of the tank contents shown at a graphic display
- Convenient tank content visualization with useful additional data, e.g. ullage
- Display of the tank contents in litres, with or without temperature compensation
- Display of product temperature and water level
- Highly flexible due to modular architecture
- Easy to upgrade and retrofit
- Precise configuration using the free software VISY-Setup
- Easy start-up
- Communication via Ethernet possible
- Free, user-friendly software for firmware updates
- Integrated alarm signal
- Wireless communication of VISY-Command GUI RF with VISY-Stick Sensors
- Optional with printer

Function

The display of the VISY-Command GUI visualises the data provided by the FAFNIR sensors. All of the relevant data related to the tank (tank number and product name), the product (level, water level and product temperature) and various additional data (e.g. ullage) are displayed. The tank information displayed is continuously refreshed and viewable at all times. Fuel deliveries and tank alarms are archived additionally in a database.

The display board is operated by a touch screen.

Special attention was given to ergonomics when determining the size of the function keys.

If required, all of the displayed tank information can be printed out using the integrated printer (option). Moreover, obligatory print-outs for alarm messages are possible. An audio warning sounds in addition to tank alarms.

Data Management

- » Volumetric display of tank contents
- » Temperature-compensated volume
- » Product temperature
- » Ullage
- » Tank and product name
- » Water level
- » Variable number of displayed tanks (16 tanks maximum)
- » Alarm messages and logging
- » History records (delivery data and alarms)
- » Archiving of delivery data and alarms in a database

Design

VISY-Command GUI		
Housing	Up to 8 sensor terminals: H 300 x W 300 x D 175 [mm]	16 sensor terminals: H 300 x W 400 x D 175 [mm]
Casing protection	IP20	
Weight	6.7 kg	10.7 kg
Ambient temperature	0 °C to +40 °C	
Supply	230 V _{AC} ± 10 %, approx. 50 VA	
Internal display	5.7" TFT touch screen	
Number of sensor terminals	2, 4 or 8	16
Host interface (RS232 / RS485)	standard	
– Ethernet module (MoxaNPort5110)	optional	
– Modem for long distance scanning	optional	
Service interface (RS232)	standard	
– Modem for long distance scanning	optional	
Extension interface (RS485)	standard	
– VISY-View Touch display	optional	
VISY-ICI 485 module	optional	
– VISY-Output (relay outputs)	optional	
– VISY-Input (digital switch inputs)	optional	
Printer	optional	

Functions

VISY-Command GUI	
Communication with the PoS / BOS system or petrol station controller	standard
Automatic filler recognition	standard
Static leak detection	standard

VISY-RF

The wireless solution for VISY-X

VISY-Command RF
VISY-Command GUI RF
External antenna
VISY-RFT module

The VISY-X tank gauging system can also be operated wirelessly. The VISY-RFT module (radio frequency transmitter) mounted in the manhole, transmits the tank

data recorded by the VISY-Stick sensors and the data of the environmental sensors wirelessly to the VISY-Command RF control unit. The control unit includes

the VISY-RFR module (radio frequency receiver) to which 2 optional available antennas can be connected.

Features of the FAFNIR technology

- Compatible with all VISY-X components
- Long battery life
- High level of data availability
- Simple to install and configure

Application

VISY-RF is used wherever the routing of cables is unfeasible, or would be too cost-intensive.

The wireless system proves beneficial in this scenario because no excavation work is required.

The wireless system is suitable for all above-ground and underground storage tanks.

Design

VISY-Command RF / VISY-Command GUI RF	
Housing	up to 16 measuring sensors H 300 x W 300 x D 125 / 175 [mm]
Casing protection	IP20

– VISY-Input (digital switch inputs)	optional
Printer	optional

VISY-RFT module	
Housing	H 82* x W 80 x D 55 [mm]
Casing protection	IP67
Ambient temperature	– 20 °C to + 60 °C
Transmission frequency:	433 MHz
Transmission range (line of sight)	max. 250 m
Battery operating time:	8 years at 5-minute transmission intervals; 4 years at 1-minute transmission intervals

(without cable glands and antenna)

Functions

VISY-Command GUI RF	
Communication with the PoS / BOS system or petrol station controller	standard
Automatic filler recognition	standard
Static leak detection	standard

VPI

VISY-Power Interface

VPI

VPI-Supply

The VPI (VISY-Power Interface) provides a communications interface between the sensors and a higher-level system (master). For the sending of commands to the sensors, the VPI supports two protocols*. The response is assigned and forwarded to the individual sensor terminals.

Up to 1,024 sensors can be connected to 32 VPIs. The sensors require a connection to the VPI. The installation location for the VPI must be outside the potentially explosive atmosphere. The VPI is designed for DIN carrier rail installation and has eight intrinsically safe sensor terminals.

Up to 32 VPIs can be circuited in parallel, depending on the quantity of sensors to be connected.

* The following protocols are supported:
1. FAFNIR Universal Device Protocol (UDP)
2. H-Protocol

Features of the FAFNIR technology

- 8 intrinsically safe sensor terminals per VPI
- Connection of max. 32 VPIs in parallel possible = 256 sensor terminals
- One sensor terminal supports the connection of up to 4 different VISY sensors
- Intrinsically safe power supply
- Passive communication via RS485
- Supply to VPI by commercially available power supply unit possible
- Two VPIs can be connected to one FAFNIR VPI-Supply (power supply unit)
- Easy DIN mounting rail installation, no additional enclosure required
- Maintenance-free

VISY-View Touch

Visualization for the Automatic Tank Gauging System VISY-X

VISY-View Touch

- Instant alarm message via e-mail
- Daily report via e-mail
- Static leak detection

Application

VISY-View Touch is a display for use with the tank gauging system VISY-X. It is a visualisation and working platform for tank contents at petrol stations and provides a convenient overview

of the installed level and environmental sensors. The VISY-View Touch display module is used wherever no petrol station cash system is available, cannot or should not be used for view-

ing tank content data. In addition, it is particularly useful to the fuel tanker driver, who will be able to read tank levels before refuelling the petrol station.

Features of the FAFNIR technology

- Permanent overview of tank contents at the petrol station
- User-friendly tank content viewer with a useful range of additional information
- Tank contents displayed in litres or gallons
- Display of product temperature and water level
- Communication with the VISY-Command control unit
- Optional printer connection
- Display of various historical data
- Free, user-friendly software for firmware updates
- Ability to connect multiple VISY-View displays if necessary
- Also usable as display for fuel tanker*

* with USB input module

Product Features

The tank content

visualization encloses:

- » Display of tank contents in litres
- » Product temperature
- » Temperature-compensated volume
- » Ullage
- » Tank and product name
- » Water level
- » Alarms for water and product
- » Delivery history for all tanks
- » Alarms for environmental sensors
- » Additional information with wireless version
- » Static leak detection

Technical data

VISY-View Touch

- » Housing dimensions:
H 205 x W 230 x D 80 [mm]
- » Display:
Embedded microcomputer with 5.7" colour touchscreen and VISY-SoftView application software
- » Plug-in power supply: 12 V_{DC}
- » Ambient temperature:
0 °C to + 40 °C
- » 1 x RS485 communication interface with VISY-Command
- » 1 x RS232 communication interface e.g. with a printer
- » Casing protection: IP20

Package contents:

- » Display
- » Plug-in power supply

Accessories:

- » Thermal transfer printer
- » Table stand
- » USB input module

VISY-View
table stand

Printer

The printer for
VISY-View Touch
(available in the colours
white and black)

Application

Optionally, it is possible to connect the printer to VISY-View Touch to print out current tank contents, delivery data and alarms.

Technical data

Printer

- » Case dimensions:
H 90 x W 100 x D 191 [mm]
- » Ambient temperature:
0 °C to + 40 °C
- » Power supply:
100 to 240 V_{AC}, 50 to 60 Hz,
via AC/DC adapter
- » Printing method:
Thermal line printing
- » Paper changing:
Easy paper drop in
- » Paper width: 58 mm ± 0.5 mm
- » Paper roll diameter:
max. 60 mm
- » Communication:
RS-232 connection to
VISY-View Touch

VISY-Input

Input module for external alarms

Input module
VISY-Input

Application

VISY-Input is an octal input module installed in a splash proofed case with protection class IP66. It connects external alarm outputs to the VISY-X high-precision tank gauging system.

For a central logging alarms detected by external systems can be forwarded to the VISY-X tank gauging system via VISY-Input. This allows the indication of alarms from different

systems at one central point. To connect to the VISY-X tank gauging system only a low-cost communication cable has to be laid.

Features of the FAFNIR technology

- Flexible installation
- Cost-effective connection to VISY-X
- Easy to configure using VISY-Setup
- External alarms displayed centrally by VISY-X
- Clear LED status indicators
- Ability to connect up to eight VISY-Input modules to VISY-X

Technical data

VISY-Input

- » Housing dimensions:
H 130 x W 180 x D 60 [mm]
(excluding cable connections)
- » Ambient temperature:
0 °C to + 40 °C
- » Casing protection: IP66
- » Communication:
1 x RS485 (connection
to VISY-Command
via VISY-ICI 485 module)
- » LEDs:
2 x power LED,
1 x status LED,
2 x communication LED,
8 x input LED
- » Inputs:
8 inputs, which can be
configured either as potential-
free voltage inputs or as
inputs for relay contacts
- » Voltage inputs:
input voltage range
5 V_{DC} (appr. 1 mA) to 24 V_{DC}
(appr. 7 mA), potential-free,
protected against polarity
reversal
- » Relay inputs: internal
power supply 12V_{DC},
relay contact current
appr. 10 mA
- » Power supply:
230 V_{AC} ± 10 %, 50 to 60 Hz,
≤ 4 VA

ICI-485 module
required to connect
VISY-Input / VISY-Output

VISY-Output

Relay output module

VISY-Output module

Application

VISY-Output is an eight relays output module installed in a splash proofed case with protection class IP66. It connects external safety devices or alarm

indicators to the VISY-X high-precision tank gauging system. Alarms, by the tank gauging system VISY-X detected, can freely be assigned to each single relay.

To connect to the VISY-X tank gauging system only a low-cost communication cable has to be laid.

Features of the FAFNIR technology

- Flexible installation
- Cost-effective connection to VISY-X
- Easy to configure using VISY-Setup
- Switching of external safety devices or alarm indicators by freely programmable relays
- Clear LED status indicators
- Ability to connect up to eight VISY-Output modules to VISY-X

Technical data

VISY-Output

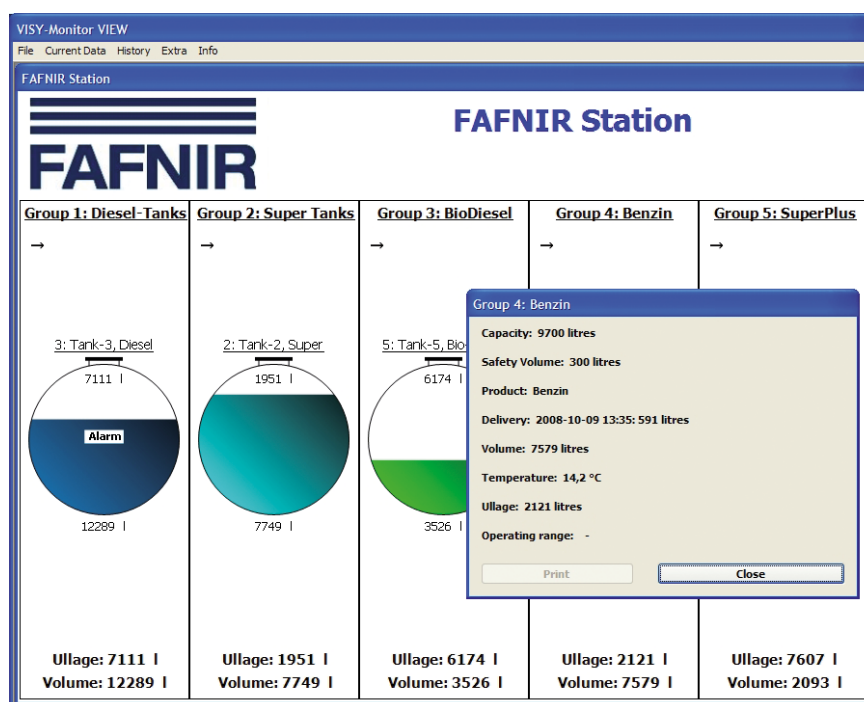

- » Housing dimensions:
H 130 x W 180 x D 60 [mm]
(excluding cable connections)
- » Ambient temperature:
0 °C to + 40 °C
- » Casing protection: IP66
- » Communication:
1 x RS485 (connection
to VISY-Command
via VISY-ICI 485 module)
- » LEDs:
1 x power LED,
1 x status LED,
8 x alarm LED,
8 x relay LED
- » Power supply:
230 V_{AC} ± 10 %,
50 Hz to 60 Hz, ≤ 4 VA
- » Outputs:
8 x relays each with one
potential-free changeover
contact;
load rating of the contacts:
AC voltage:
 $U_{\text{eff}} \leq 250 \text{ V}$, $\cos \phi \geq 0,7$,
 $I_{\text{eff}} \leq 3 \text{ A}$, $P_{\text{eff}} \leq 300 \text{ VA}$;
DC voltage:
 $U \leq 24 \text{ V}$, $I \leq 2 \text{ A}$, $P \leq 50 \text{ W}$

ICI-485 module
required to connect
VISY-Input / VISY-Output

VISY-Monitor

Software Application

**The VISY-Monitor
software application**

VISY-Monitor is a software application for monitoring and recording data from tanks at petrol stations, fuel depots, etc.

It displays the tank data and serves as a working platform for the tank data at petrol stations.

Features of the FAFNIR technology

- Permanent overview of tank contents by graphical representation
- Convenient tank content visualization with useful additional data, e.g. ullage
- Tank contents displayed in litres or gallons
- Display of product temperature and water level
- Clearly presented numerical and graphical representation of historical data
- Automatic tank calibration
- Reconciliation
- Automatic leakage monitoring
- Automatic tank mapping
- Static and dynamic leakage monitoring
- Communication with the VISY-Command control unit
- Connection to the VISY-Tank resource management software application via Ethernet
- Three separate channels for connection to different tank gauging systems
- Supports the most common tank gauging systems
- Runs on Windows NT / 2000 / XP / Vista / Win7

Function

VISY-Monitor displays a fully comprehensive range of tank data. The filling level data from the VISY-X system (VISY-Stick and VISY-Command) are forwarded to the PC and displayed by the VISY-Monitor software application. VISY-Monitor supports different types of tank data, including all relevant data about the tank (tank number and content) and the product (filling level, water level and product temperature) as well as additional information (e.g. ullage). The tank information displayed is continuously refreshed and viewable at all times. In addition, VISY-Monitor offers a wide range of other features, such as automatic tank calibration, optimum leakage monitoring and the ability to display historical data. Historical data are displayed in tabular and graphical form and can be printed out. All inventory and event data are stored indefinitely in a database for further processing.

It is also possible to connect an external journal printer for documenting current tank levels and enabling mandatory printouts of all alarm messages. For audible alarms, it is a simple matter of connecting up to a standard audio system.

In addition to FAFNIR sensors, two further tank gauging systems from the most common manufacturers can be connected in parallel, which means that existing sensors can be replaced in stages.

Data Management

- » Volumetric representation of tank contents
- » Temperature-compensated volume
- » Product temperature
- » Ullage
- » Tank and product name
- » Water level
- » Variable number of displayed tanks
- » Alarm messages and logging
- » Automatic tank calibration
- » Reconciliation
- » Automatic loss and leakage monitoring
- » History logging
- » All data stored in a database

System requirements

- » CPU 700 MHz
- » RAM 512 MB
- » Spare hard drive capacity for VISY-Monitor software application: 30 MB
- » Windows 2000 Professional with SP4, Windows XP Professional with SP2 or Windows Vista with SP1, Win 7 (32 bit)
- » Microsoft.NET 2.0 Framework
- » 2 x RS 232 ComPort
 - to connect VISY-Command
 - to connect to PoS (no USB-To-Serial Adapter)

Accessories

1" Installation Kit

The optional installation kit comprises a product float, a water float and a screw-in unit. It makes it possible to install a VISY-Stick using an G 1 threaded coupler. The screw-in unit is also available in stainless steel.

1" Installation Kit

1" Installation Kit

Dimensions in mm

VISY-RFT installation kit

Installation kit
for mounting
a VISY-RFT module.

RFT-Battery

Battery for the
VISY-RFT module

Antenna cable

50 ohm coaxial
cable for connecting
external antennas to
VISY-Command (GUI) RF,
low attenuation

BNC Connector set

consisting of:
2 x BNC plug
1 x BNC-F adapter

External antenna

For connection to the
VISY-Command (GUI) RF.

RF-Meter

The RF meter measures
the radio field strength
for a comfortable start-
up of VISY-RF.

Connection cable M12

The blue, fuel-resistant
installation and connection
cables are two metres
long, 4-wire and available
in two versions:
straight and 90° elbow.

VISY-Connecting cable

Cable for VISY-X
installations:
4 x 0,75 mm², blue,
fuel resistant

Junction Tube

The 5-pin cable coupler makes
it quick and easy to establish
the connection between the
VISY-Stick and the cable to
the VISY-Command.

1" LPG float

Optional available
instead of the
standard LPG float
