## PRODUCT INFORMATION

### BLUEBERRY FLAVOUR 4568 NA-WS

#### DESCRIPTION

A light yellow to orange coloured liquid with a prominent and fruity blueberry puree aroma and flavour.

Specific gravity at 25°C: 1.021 - 1.041

#### APPLICATION

This flavour is developed as a booster for natural blueberry puree, which is commonly used in pie fillings, jelly layer and cream fillings for cakes and confectionery. The general application dosage is 0.05 to 0.2% in the base material.

Usually, if you reduce the natural blueberry puree content e.g. with extra glucose or jelly by adding the booster, you need to adjust the colour. Therefore, we have developed a 2 in 1 product - Blueberry Flavour GA0136 (flavour + colour) so that at the recommended dosage of 0.5%, you will have a distinctive blueberry flavour and appearance. This can be a 100% replacement in products like ice-cream, milk, and yoghurt. Of course natural blueberry can be incorporated - in which case the dosage can be reduced accordingly.

#### LEGAL STATUS

This flavour is compounded from nature-identical flavour ingredients which are FEMA GRAS with Propylene Glycol USP as solvent.

#### CLASSIFICATION

It is classified as nature-identical flavour for all countries.

#### STORAGE

Keep sealed in a cool place, away from direct sunlight. This flavour improves with age and it is stable for two years.

#### PACKING

- 25kg HDPE plastic drum
- 5kg plastic container packed in a carton of 4 x 5kg
