

TOWER KIT

The Most Comprehensive And Cost-Effective
Lightning Protection Solution For Communication Towers

- A packaged Lightning Protection System for Communication Towers
- Provides Total Lightning Protection comprising of:
 - Direct Strike Protection
 - Surge Protection
 - Grounding

An illustration of a Tower Kit installation

Highlights of the Protection

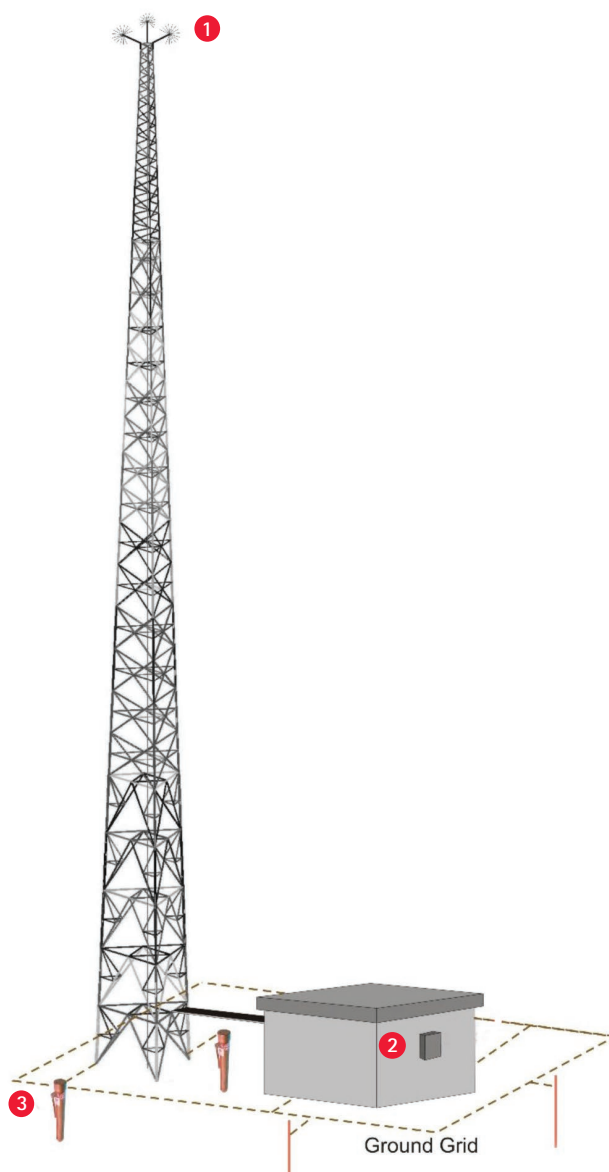

- Prevents low intensity lightning strike termination and safely collects all other incoming strikes within protected facility
- Designed to protect the facility from close proximity step leaders and do not draw strikes to the facility unnecessarily
- Reduces secondary effects of lightning on electronic equipment
- Maintenance-free system

Benefits for You

- Protects your assets and investment
- Maintains reliability of your equipment with protection against the secondary effects of lightning
- Reduces operational risks caused by lightning strikes
- Maximizes operation uptime
- Reduces maintenance cost

Tower Kit

Total Lightning Protection Solution

1

SPLINE BALL IONIZER™

A highly effective Hybrid type of Direct Strike Protection System that is designed to provide Controlled Termination of direct strikes - preventing lower intensity lightning downward leaders from forming while collecting higher intensity lightning downward leaders.

2

SURGE PROTECTOR

A high performance AC Power surge protector with full 7-mode protection and special ELCB Nuisance Tripping Reduction feature. Designed for maximum protection at minimal cost.

3

CHEM-ROD™

An ultra efficient low impedance grounding solution designed for lightning protection, transient protection and all types of grounding requirements.

Includes:

- Grounding Augmentation Fill
- Ground Electrode
