LPI® STORMASTER ESE

Protection Performance

The protection radius (R_p) of a Stormaster ESE terminal is calculated using the formula defined by the French National Standard NF C 17-102 (September 2011), namely:

$$(1) R_p[h] = \sqrt{2rh - h^2 + \Delta[2r + \Delta]} \text{ for } h \geq 5 \text{ m}$$

and

$$(2) R_p = h \times R_{p5} / 5 \text{ for } 2 \leq h < 5 \text{ m}$$

Where h = actual height of Stormaster terminal above the area to be protected (m).

R_{p5} = value of R_p from Eqn. [1] when $h = 5 \text{ m}$

r = 20 m for protection level I [Very High protection]
 30 m for protection level II [High protection]
 45 m for protection level III [Medium protection]
 60 m for protection level IV [Standard protection]

Δ = Stormaster time and height advantage according to the Stormaster model installed:

Stormaster-ESE-15: $\Delta = 15 \mu\text{s}$

Stormaster-ESE-30: $\Delta = 30 \mu\text{s}$

Stormaster-ESE-50: $\Delta = 50 \mu\text{s}$

Stormaster-ESE-60: $\Delta = 60 \mu\text{s}$

Section L – Downconductors

LPI® High Voltage Shielded Cable

Withstand Voltage of $\geq 500\text{kV}$

LPI's "High Voltage Shielded Cable" (HVSC Plus) is a purpose-designed, high-integrity, low-impedance cable that is used to safely convey lightning currents to earth with minimal risk of side flashing or structure electrification. The design of the HVSC Plus incorporates carefully selected dielectric components to ensure optimum performance under the impulse or "transient" voltages and currents imposed by lightning discharges.

LPI's new HVSC Plus provides improved features as a dedicated insulated lightning downconductor:

- Double the voltage withstand performance of past versions;
- 35% reduction in the mass per unit length of the cable;
- Improved manufacturing consistency via a continuous "triple extrusion" process;
- Reduced voltage stress via thin, semi-conductive screen layers; and
- Improved material parameters and performance.

The design of the cable is based on the optimisation of all of the key parameters associated with dealing with lightning discharges and the consequent voltage and current transients, including impedance, inductance, capacitance, insulation thickness (withstand voltage) and all of the relevant lightning statistics, plus practical aspects such as size, flexibility and mass.

Figure 1: Construction of the HVSC Plus lightning downconductor cable.

HVSC Plus has been tested by a certified, independent high voltage laboratory located at Monash University, Australia.

Section U - LPI® Earthing Compounds

LPI® GRIP

LPI® Ground Resistance Improvement Powder (GRIP) is a premium product designed to reduce soil resistivity in the poorest soil conditions. When GRIP is mixed with water and poured onto the earthing system and surrounding soil, the powder and water react to form a gelatinous mass which will not reduce, contract or separate from the earth electrodes its surrounds.

Ordering Code	GRIP-10	GRIP-40
Description:	Ground resistance improvement powder	
Application:	To assist in achieving an earth resistance of less than 10 Ohms	
Weight:	Part A = 5 kg Part B = 5 kg	Part A = 20 kg Part B = 20 kg

LPI® RESLO

LPI® RESLO-20 is a low-resistance, non-corrosive, bentonite-based earth enhancing compound which is supplied in easy-to-handle 20 kg bags.

Ordering Code	RESLO-20
Description:	Resistance lowering compound – 20 kg Bag
Application:	To assist in achieving an earth resistance of less than 10 Ohms
Weight:	20 kg
