

ABB MEASUREMENT & ANALYTICS

Spirit<sup>IT</sup> Flow-X

# Shaping the metering industry one flow computer at a time

How do you make a great product even better? Expand the installation environments it can be used in.

The Flow-X series of flow computers is the most versatile and cost effective platform of custody transfer that meets the needs of today's demanding accuracy, security and usability requirements for any company across the globe.

The Flow-X is used for liquid and gas hydrocarbon measurement and control in LACT and truck & rail loading and offloading, portable provers and waste water.

The new C1D2 approval allows for an extended operating temperature range from -40°F to +167°F. Why pay extra for proprietary software, gas or liquid applications. With Flow-X it is included.

Measurement made easy. [abb.com/midstream](http://abb.com/midstream)
